

X-Trim Analytics is a strategic analysis solution specially designed for Production Directors and Planning Supervisors to evaluate past performance from a trim optimisation perspective.

## Motivation

X-Trim Analytics will help you answer questions like these:

- Which grade generates more waste?
- What is the trim (waste) trend over time?
- Which planners generate or consume more stock?
- What is the optimal number of orders per run?
- What is the optimal size of a run?
- How is the monthly or weekly performance of each planner?
- How do current waste levels compare with last year?

X-Trim Analytics provides the facts to align the everyday work with the company's strategic vision.

## Usability

X-Trim Analytics can be reached from anywhere via the internet. Thus, Directors and Managers can gather information from any place they are, and analyse it online.

Easy point-and-click navigation with drill-down to examine each perspective in greater depth.

Available also on mobile platforms (Android® and iOS®)

## Benefits

- Natively integrated to X-Trim®
- Quick implementation (less than 1 week)
- Possibility to add customised indicators
